Kungsbron is located in the most central parts of Stockholm, just across the Central Station. Gross floor space is 36 000 sq m and involves partly building over the railway tracks.

The property was developed for office use and companies with varying size demands. Both the building and the floor layout were designed for absolute flexibility and to maximize the use of the premises. Floors can be connected both vertically and horizontally.

A middle floor towards Östra Järnvägsgatan is formed for a wider range of usage; railway entrance, shops, travel bureaus, services, restaurants, meeting places and a conference centre.
