LOCATION: Stockholm, Sweden

CLIENT:

TYPE: Masterplanning, Detail Planning

STATUS: Under Assessment

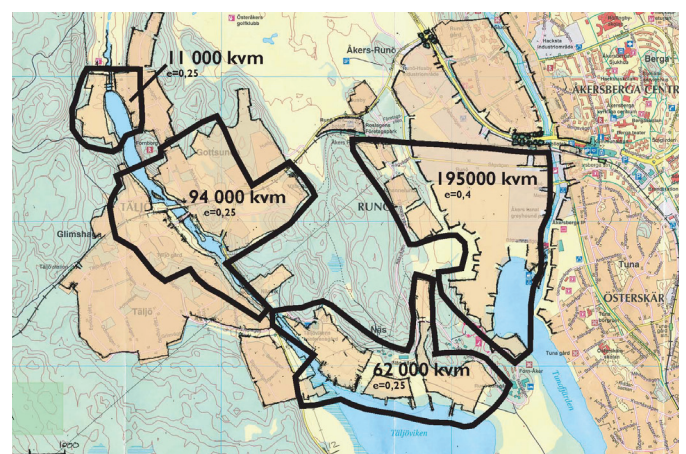

DATE: 2004

Limited competition for how a small community can grow towards the sea.

Proposed a new seafront structured along light rail. The landscape invites recreation and active farming as well as living. The theme is based around the regional architecture of the Scandinavian small town, or of the garden city.

Variations in size and density are proposed throughout the roughly one hundred blocks in the urban grid. The small scale also allows private developers to invest in the area, as well as large developers.
